## DETAILED ACTION

### ***Response to Arguments***

Applicant's arguments filed 10/16/2006 have been fully considered but they are not persuasive. In response to applicant's argument that the Ho reference does not teach that the marking patterns are not used "for counting dummy patterns", a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ho et al (U.S. PG Pub #2004/0033689).

With respect to **claim 1**, Ho teaches a semiconductor device comprising a semiconductor substrate (Fig. 7a, 100); dummy patterns (Fig. 6, 102c) for a CMP method (Paragraph 2) formed in a uniform pattern over the semiconductor

substrate; and marking patterns (Figs. 6 and 7, 102a) that are formed over the semiconductor substrate to correspond to predetermined groups of the dummy patterns.

In reference to the claim language referring to the function of the marking patterns; intended use and other types of functional language must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. *In re Casey*, 152 USPQ 235 (CCPA 1967); *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

With respect to **claim 2**, Ho teaches that the marking patterns have a different shape from the dummy patterns (Fig. 6, marking pattern 102a is square and dummy patterns 102c are rectangular).

With respect to **claim 3**, Ho teaches that the marking patterns 102a have a different size from the dummy patterns 102c.

With respect to **claim 4**, Ho teaches that the marking patterns are smaller than the dummy patterns (Figs. 6 and 7).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
